

BS EN 1729

BS EN 1729 This is a relatively new standard, in two parts, that specifies the dimensions, strength and stability of educational furniture. It applies to tables and chairs giving recommendations for the pupils heights and the correct chair seat height to working surface height.

Part 1: for size and dimensions of products ensuring correct seating posture.

Part 2: for strength and stability - checks product safety in use and ensures products will stand up to classroom demands.

Any product must pass both parts to fully comply with BS EN 1729.

Products that meet these standards are highlighted within this catalogue.
